

Local AI Workflows with n8n

Assessment — 2 Sets of MCQ Questions

Ganpat University · 15 Questions per Set · 4 Options Each

 **Set 1 — Concepts & Setup**

 **Set 2 — Tools & Advanced**

 **Answers — Last Page**

Set 1 — Concepts & Setup

Topics: Docker, n8n, Ollama, Webhook, Basic LLM Chain, File Handling, HTTP Requests, AI Agent, Memory

Name: _____ Date: _____ Score: _____ / 15

Q1. What is Docker primarily used for in the n8n AI Starter Kit?

- A. Writing Python scripts
- B. Running software in isolated containers
- C. Storing AI model weights
- D. Connecting to the internet

Q2. Which command starts all n8n starter kit services in CPU mode?

- A. docker run n8n
- B. docker start all
- C. docker compose --profile cpu up -d
- D. npm start n8n

Q3. What is the correct Ollama base URL to use inside n8n nodes?

- A. http://localhost:11434
- B. http://127.0.0.1:11434
- C. http://ollama:11434
- D. http://0.0.0.0:11434

Q4. In Exercise 1 (AI Code Reviewer), which node triggers the workflow?

- A. Manual Trigger
- B. Chat Trigger
- C. Webhook
- D. Schedule Trigger

Q5. What does the 'Response Mode: Response Node' setting do in the Webhook?

- A. Sends an automatic 200 OK immediately
- B. Waits for the Respond to Webhook node before replying
- C. Returns the raw JSON from Ollama
- D. Disables the webhook response

Q6. In Exercise 2 (Explain Like I'm 5), which model gives the best ELI5 results?

- A. tinyllama
- B. qwen2.5:3b
- C. llama3.2
- D. phi3:mini

Q7. What is the purpose of the 'Extract from File' node in Exercise 3?

- A. Downloads a file from the internet
- B. Converts binary file data into readable text
- C. Saves the AI output to a file
- D. Reads the Ollama model weights

Q8. Which command uploads a file from Windows into the n8n container?

- A. docker push document.txt n8n:/path/
- B. docker cp document.txt n8n:/home/node/.n8n-files/document.txt
- C. docker send document.txt n8n
- D. docker volume add document.txt

Q9. In Exercise 4, what HTTP method does the catfact.ninja API use?

- A. POST
- B. PUT
- C. DELETE
- D. GET

Q10. To extract a fact from catfact.ninja, which expression is correct?

- A.={{ \$json.data }}
- B.={{ \$json.text }}
- C.={{ \$json.fact }}
- D.={{ \$json.result }}

Q11. What is the key difference between an AI Agent and a Basic LLM Chain?

- A. The AI Agent uses a different programming language
- B. The AI Agent can use tools and memory; the LLM Chain only generates text
- C. The LLM Chain is faster than the AI Agent
- D. The AI Agent requires an internet connection

Q12. In Exercise 5, why is the Calculator Tool better than asking the AI to calculate?

- A. The Calculator Tool is faster
- B. The Calculator Tool has internet access
- C. LLMs can hallucinate wrong numbers; the tool always computes accurately
- D. The Calculator Tool uses a different AI model

Q13. What does 'Context Window Length: 10' mean in the Simple Memory node?

- A. The AI can only answer 10 questions total
- B. The memory stores the last 10 messages in the conversation
- C. The AI uses 10 tokens per response
- D. The workflow runs 10 times automatically

Q14. In Exercise 6, which expression gets the student's chat question for the Data Table?

- A.={{ \$json.chatInput }}
- B.={{ \$json.input }}
- C.={{ \$('When chat message received').item.json.chatInput }}

D. `{{ $json.message }}`

Q15. What does RAG stand for in Exercise 7?

- A. Rapid API Generation
- B. Retrieval-Augmented Generation
- C. Real-time AI Gateway
- D. Random Answer Generator

Set 2 — Tools & Advanced Features

Topics: Qdrant, RAG Pipeline, Code Tool, Data Table, Embeddings, Vector Database, Prompt Engineering

Name: _____ Date: _____ Score: _____ / 15

Q1. What is Qdrant used for in the n8n AI Starter Kit?

- A. Running AI language models locally
- B. Storing workflow execution history
- C. A vector database for semantic search and RAG
- D. Managing Docker containers

Q2. Which model is used for creating text embeddings in the RAG Pipeline?

- A. phi3:mini
- B. qwen2.5:3b
- C. tinyllama
- D. mxbai-embed-large

Q3. What Vector Size must be set when creating the rag_collection in Qdrant?

- A. 512
- B. 768
- C. 1024
- D. 2048

Q4. In Exercise 7, why does the Qdrant retriever need its own Embeddings Ollama node?

- A. Each Qdrant node needs a dedicated Embeddings node — they cannot share one
- B. The retriever uses a different embedding model than the ingestion
- C. The ingestion Embeddings node is deleted after ingestion
- D. Qdrant can only connect to one Ollama instance

Q5. Which n8n node splits a PDF into smaller pieces before storing in Qdrant?

- A. Default Data Loader
- B. Embeddings Ollama
- C. Recursive Character Text Splitter
- D. Text Extractor

Q6. What does 'Chunk Overlap: 50' mean in the Text Splitter node?

- A. Each chunk is exactly 50 characters long
- B. Consecutive chunks share 50 characters to avoid cutting sentences
- C. The splitter skips every 50 characters

D. A maximum of 50 chunks are created

Q7. In Exercise 6, the Code Tool uses which programming language?

- A. Python
- B. TypeScript
- C. JavaScript
- D. Bash

Q8. Which n8n node is used to save data permanently to a built-in database in Exercise 6?

- A. Write File
- B. Insert Row
- C. Save Data
- D. Append Row

Q9. What is the system message in Exercise 7 designed to make the AI do?

- A. Answer from training data only
- B. Always use the retriever tool first before answering
- C. Ignore questions it cannot answer
- D. Respond only in English

Q10. In Exercise 2, what makes the ELI5 prompt more effective than a simple prompt?

- A. It uses a larger AI model
- B. It specifies the audience, tone, length, and language constraints
- C. It disables the system message
- D. It sends the request faster

Q11. Which Docker command checks which containers are currently running?

- A. docker list
- B. docker status
- C. docker ps
- D. docker show

Q12. In Exercise 3, what happens if the .n8n-files folder is missing?

- A. The workflow creates it automatically
- B. The Read File node returns an empty result
- C. n8n throws an 'Access to file is not allowed' error
- D. The Docker container restarts

Q13. What is the purpose of the 'Tool Name: retriever' setting in the Qdrant node?

- A. It names the collection in Qdrant
- B. It identifies the tool so the AI Agent knows how to call it
- C. It sets the search limit
- D. It enables metadata storage

Q14. In Exercise 4, what is the difference between catfact.ninja and adviceslip APIs?

- A. catfact uses POST, adviceslip uses GET
- B. catfact uses a different authentication method
- C. catfact.ninja returns 'fact' at top level; adviceslip nests 'advice' inside 'slip'
- D. adviceslip requires an API key

Q15. Which statement about the n8n Data Table in Exercise 6 is correct?

- A. Data is lost every time Docker restarts
- B. Data is only stored in the browser session
- C. Data persists permanently — it survives workflow runs and Docker restarts
- D. Data is stored in the Qdrant vector database

Answer Key

Set 1 — Concepts & Setup

Question	Question Text (abbreviated)	Answer	Correct Option
Q1	What is Docker primarily used for in the n8n AI Starter Kit?	B	B. Running software in isolated containers
Q2	Which command starts all n8n starter kit services in CPU mode?	C	C. docker compose --profile cpu up -d
Q3	What is the correct Ollama base URL to use inside n8n nodes?	C	C. http://ollama:11434
Q4	In Exercise 1 (AI Code Reviewer), which node triggers the workflow?	C	C. Webhook
Q5	What does the 'Response Mode: Response Node' setting do in the Webh...	B	B. Waits for the Respond to Webhook node before replying
Q6	In Exercise 2 (Explain Like I'm 5), which model gives the best ELI5...	D	D. phi3:mini
Q7	What is the purpose of the 'Extract from File' node in Exercise 3?	B	B. Converts binary file data into readable text
Q8	Which command uploads a file from Windows into the n8n container?	B	B. docker cp document.txt n8n:/home/node/.n8n-files/document.txt
Q9	In Exercise 4, what HTTP method does the catfact.ninja API use?	D	D. GET
Q10	To extract a fact from catfact.ninja, which expression is correct?	C	C. ={{ \$json.fact }}
Q11	What is the key difference between an AI Agent and a Basic LLM Chain?	B	B. The AI Agent can use tools and memory; the LLM Chain only generates text
Q12	In Exercise 5, why is the Calculator Tool better than asking the AI...	C	C. LLMs can hallucinate wrong numbers; the tool always computes accurately
Q13	What does 'Context Window Length: 10' mean in the Simple Memory node?	B	B. The memory stores the last 10 messages in the conversation
Q14	In Exercise 6, which expression gets the student's chat question fo...	C	C. ={{ \$('When chat message received').item.json.chatInput }}
Q15	What does RAG stand for in Exercise 7?	B	B. Retrieval-Augmented Generation

Set 2 — Tools & Advanced Features

Question	Question Text (abbreviated)	Answer	Correct Option
Q1	What is Qdrant used for in the n8n AI Starter Kit?	C	C. A vector database for semantic search and RAG
Q2	Which model is used for creating text embeddings in the RAG Pipeline?	D	D. mxbai-embed-large
Q3	What Vector Size must be set when creating the rag_collection in Qd...	C	C. 1024
Q4	In Exercise 7, why does the Qdrant retriever need its own Embedding...	A	A. Each Qdrant node needs a dedicated Embeddings node — they cannot share one
Q5	Which n8n node splits a PDF into smaller pieces before storing in Q...	C	C. Recursive Character Text Splitter
Q6	What does 'Chunk Overlap: 50' mean in the Text Splitter node?	B	B. Consecutive chunks share 50 characters to avoid cutting sentences
Q7	In Exercise 6, the Code Tool uses which programming language?	C	C. JavaScript
Q8	Which n8n node is used to save data permanently to a built-in datab...	B	B. Insert Row
Q9	What is the system message in Exercise 7 designed to make the AI do?	B	B. Always use the retriever tool first before answering
Q10	In Exercise 2, what makes the ELI5 prompt more effective than a sim...	B	B. It specifies the audience, tone, length, and language constraints
Q11	Which Docker command checks which containers are currently running?	C	C. docker ps
Q12	In Exercise 3, what happens if the .n8n-files folder is missing?	C	C. n8n throws an 'Access to file is not allowed' error
Q13	What is the purpose of the 'Tool Name: retriever' setting in the Qd...	B	B. It identifies the tool so the AI Agent knows how to call it
Q14	In Exercise 4, what is the difference between catfact.ninja and adv...	C	C. catfact.ninja returns 'fact' at top level; adviceslip nests 'advice' inside 'slip'
Q15	Which statement about the n8n Data Table in Exercise 6 is correct?	C	C. Data persists permanently — it survives workflow runs and Docker restarts
